BUSINESS REQUIREMENT DOCUMENT (BRD)

AI-Based ATS & Vendor Employee Portal System

1. PROJECT OVERVIEW

1.1 Purpose

To design and develop a Vendor-Based Recruitment Management System consisting of:

- AI-Integrated Applicant Tracking System (ATS)
- Vendor Organization & Recruiter Management
- Employee Activity Tracking Portal
- AI Audio/Video Interview Module

The system will be used internally by:

- Master Admin (Company Owner)
- Sub-Vendor Organizations
- Vendor Recruiters

Note: This system will NOT be used directly by end clients. It will be used by vendor partners who submit candidates against requirements.

2. SYSTEM OBJECTIVES

- Replace email-based resume submission with structured ATS.
- Enable AI-based candidate screening (Audio/Video Interview).
- Provide activity tracking for vendor recruiters.
- Allow organization-level management with hierarchy.
- Create a scalable multi-vendor recruitment ecosystem.

3. USER TYPES & ROLES

3.1 Master Admin (Super Admin)

Who: Platform Owner
Access Level: Full system access

- Create Vendor Organizations & Approve/Deactivate Vendors
- View all job postings & candidate pipelines
- Monitor all recruiter activity
- Configure AI Interview settings
- Subscription & billing management

3.2 Vendor Organization Admin (Vendor Head)

Who: Sub-vendor company head
Access Level: Organization-level control

International Compute Alliance
+91 86394 66692

- Manage recruiters under their organization (Create Login IDs)
- View jobs assigned to their organization
- Upload candidate resumes & track candidate status (L1, L2, Rejected)
- View recruiter activity reports (Login/Logout, Leave)

3.3 Recruiter (Vendor Recruiter)

Who: Recruiters inside vendor company
Access Level: Limited to assigned jobs

- View assigned job requirements & upload resumes
- Schedule AI screening & add comments
- Update candidate status & track own performance

3.4 Candidate (External User)

Who: Job applicant

- Apply via job link & upload resume
- Take AI Interview (Audio / Video)
- View interview completion status

4. SYSTEM MODULES & SCREENS

MODULE 1: Authentication

- Login Screen
- Forgot Password
- Role-Based Dashboard Redirect

MODULE 2: Master Admin Panel

- **Master Dashboard:** Total Vendors, Active Recruiters, Active Jobs, Total Candidates, Interviews Scheduled.
- **Organization Management:** Create/Edit Organization, Assign Subscription Plan, Activate/Deactivate Vendor.
- **Job Management:** Create/Edit/Close Job, Assign to Vendor(s).
- **Global Candidate Pipeline:** Filter by Vendor/Job, Status Tracking.
- **AI Configuration:** Interview Type, Question Bank, Scoring Criteria.
- **Billing:** Recruiter seat-based pricing, Usage tracking.

MODULE 3: Vendor Organization Panel

- **Vendor Dashboard:** Active Jobs, Candidates Submitted, Recruiter Activity Summary.
- **Recruiter Management:** Add/Edit/Deactivate Recruiter, Seat Count Management.
- **Job Listing View:** View assigned jobs and details.
- **Candidate Submission Panel:** Upload Resume, Assign Recruiter, Schedule AI Interview.
- **Recruiter Activity Tracking:** Login Duration, Logout Time, Leave Request, Resume Upload Count.

MODULE 4: Recruiter Panel

- **Recruiter Dashboard:** Assigned Jobs, Candidates Submitted, Interview Pending, Rejected.
- **Job Detail View:** JD Description, Required Skills, Experience.
- **Candidate Upload:** Upload Resume, Enter Details, Submit to ATS.
- **Activity Panel:** Login/Logout history, Leave application.

MODULE 5: Candidate Portal

- **Job Application Page:** Name, Email, Mobile, Resume Upload.
- **AI Interview Screen:** Audio/Video Interface, AI Avatar, Question flow.
- **Completion Page:** Status and Thank You message.

MODULE 6: AI Interview Module

- AI-generated questions based on JD.
- Audio/Video recording and Speech-to-text processing.
- AI scoring algorithm (Communication Score, Skill Match %, Confidence Score).
- Recommendation output (Proceed / Reject).

5. END-TO-END USER FLOWS

FLOW 1: Vendor Onboarding
Master Admin → Create Organization → Assign Subscription → Vendor Head Receives Login → Creates Recruiter IDs

FLOW 2: Job Posting & Assignment
Master Admin → Create Job → Assign to Vendor → Vendor Views Job → Recruiter Starts Sourcing

FLOW 3: Candidate Submission
Recruiter → Upload Resume → Add Details → Submit to ATS → Status: Applied

FLOW 5: AI Screening Process
Admin/Recruiter → Schedule Interview → Candidate Gets Link → AI Interview → Scorecard Generated

6. ESTIMATED SCREEN COUNT

7. FUNCTIONAL REQUIREMENTS SUMMARY

- Multi-tenant architecture
- Role-based access control
- AI Interview integration
- Resume storage & parsing
- Interview scoring system
- Activity tracking engine

International Compute Alliance
+91 86394 66692

Module	Approx. Screens
Authentication	3
Master Admin	6–8
Vendor Admin	6–7
Recruiter	5–6
Candidate	4
AI Module	3–4
Total Estimated	**30–35 Screens**

- Seat-based billing model
- Cloud deployment ready
- Scalable database architecture

8. NON-FUNCTIONAL REQUIREMENTS

- Secure authentication (JWT/OAuth) & Data encryption
- Scalable infrastructure & Real-time logging
- 99% uptime & Audit logs

9. FUTURE ENHANCEMENTS (PHASE 2)

- Live Face-to-Face AI Interview
- Client Panel Access
- Advanced Analytics Dashboard
- Resume Auto-Matching Engine & AI Candidate Ranking

10. RECOMMENDED DEVELOPMENT APPROACH

Due to incomplete and unstructured existing portal (as discussed), it is recommended:

1. Rebuild system from scratch
2. Define clean architecture
3. Use modular microservice approach
4. Implement AI via scalable APIs
